Integrated Extinguishing control planning

Single-sector extinguishing

Combined fire detection and extinguishing control panel FC720 operating as a single-sector extinguishing system. FC720 works with most types of extinguishing systems for room or object protection. A single-sector installation consists of a single flooding zone and cylinder bank. In case of a fire, the extinguishing agent flows through the manifolds to the flooding zone and is distributed there by the nozzles. The system can be optionally configured with a reserve cylinder battery.
